

AI Finance Media & Intelligence System

Product Requirement Document (PRD) – v1.1

Vision

To build a trustworthy, scalable, AI-driven finance media system that explains finance, markets, and policies clearly and calmly, while converting audience attention into sustainable revenue through ethical automation.

Objective

Build an end-to-end, modular, AI-powered system that autonomously creates, validates, publishes, markets, and monetizes finance content with strict safety, credibility, and human oversight in the initial phase.

System Scope

The system handles research, real-time news ingestion, content creation, validation, human approval, publishing, marketing, engagement analysis, monetization, and continuous learning.

Content Coverage

Finance instruments, markets, investment thinking (non-advisory), government policies, cross-country comparisons, and real-time finance news.

Content Philosophy

Educational, lightly opinionated, data-backed, curiosity-driven, calm, and human-like. No advice, predictions, guarantees, or political opinions.

Trust & Safety

Accuracy over speed, clear fact vs interpretation separation, time-stamping, uncertainty acknowledgment, and jurisdiction clarity.

Human-in-the-Loop

Mandatory human approval for all content during the initial phase, with approve/edit/reject/delay options.

Distribution & Growth

Platform-aware publishing, ethical reach optimization, engagement tracking, and learning from feedback.

Monetization

Subscriptions, B2B partnerships, white-label intelligence, and data products. No paid tips or signals.

Targets & Metrics

Audience growth, engagement quality, and monetization performance tracked and optimized.

Scalability & Extensibility

Modular, plug-in based architecture allowing new domains, platforms, and monetization models without core rewrites.
